

EEG

- Non-invasive
- High temporal
- Low cost
- Portable
- Suitable for real-time BCI

fNIRS

- Non-invasive
- Moderate spatial resolution
- Lower cost
- Portable
- Good for surface cortical BCI

MEG

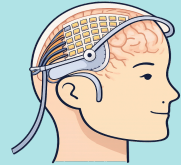

- Non-invasive
- High temporal resolution
- High cost
- Immobile
- Magnetically shielded room

fMRI

- Non-invasive
- High spatial resolution
- Very high cost
- Immobile
- Low temporal resolution

ECoG

- Invasive
- High spatial resolution
- Very high cost
- Immobile
- Suitable for clinical and experimental BCI
